## **MARK SCHEME for the May/June 2015 series**

### **9701 CHEMISTRY**

**9701/41**

Paper 4 (Structured Questions), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2015 series for most Cambridge IGCSE<sup>®</sup>, Cambridge International A and AS Level components and some Cambridge O Level components.

® IGCSE is the registered trademark of Cambridge International Examinations.

Question	Marking point	Marks
1 (a)	oxygen: $(1s^2) 2s^2 2p^4$ fluorine: $(1s^2) 2s^2 2p^5$	1
(b) (i)	$F_2O$ / $OF_2$	1
(ii)		1
(iii)	bent <b>or</b> non-linear	1
(c) (i)	$E^\ominus$ values: $F_2 / F^- = 2.87\text{ V}$ <b>and</b> $Cl_2 / Cl^- = 1.36\text{ V}$ fluorine (has the more positive $E^\ominus$ so) is more oxidising	1 1
(ii)	redox	1
(iii)	$ClF + 2KBr \longrightarrow KCl + KF + Br_2$	1
<b>[Total: 8]</b>		
2 (a) (i)	hydrogen chloride <b>or</b> $HCl$	1
(ii)	<b>either</b> $(RCOCl)$ has two electron-withdrawing groups/atoms, making the <b>more</b> $\delta^+$ /electron deficient <b>or</b> $(RCOCl)$ has an oxygen, making the <b>carbon more</b> $\delta^+$ /electron deficient <b>or</b> $(RCOCl)$ has two electron-withdrawing groups, <b>weakening the C–Cl bond</b>	1
