9701/22

May/June 2011

1 hour 15 minutes

Additional Materials: Data Booklet

READ THESE INSTRUCTIONS FIRST

DO **NOT** WRITE ON ANY BARCODES.

A Data Booklet is provided.

At the end of the examination, fasten all your work securely together.

For Examiner's Use

5	
Total	

This document consists of **11** printed pages and **1** blank page.

Answer **all** the questions in the spaces provided.

For
Examiner's
Use

- 1 Ethanoic acid can be reacted with alcohols to form esters, an equilibrium mixture being formed.

The reaction is usually carried out in the presence of an acid catalyst.

- (a) Write an expression for the equilibrium constant, K_c , for this reaction, clearly stating the units.

$$K_c =$$

units [2]

In an experiment to determine K_c a student placed together in a conical flask 0.10 mol of ethanoic acid, 0.10 mol of an alcohol ROH, and 0.005 mol of hydrogen chloride catalyst.

The flask was sealed and kept at 25 °C for seven days.

After this time, the student titrated all of the contents of the flask with 2.00 mol dm⁻³ NaOH using phenolphthalein indicator.

At the end-point, 22.5 cm³ of NaOH had been used.

- (b) (i) Calculate the amount, in moles, of NaOH used in the titration.
- (ii) What amount, in moles, of this NaOH reacted with the hydrogen chloride?
- (iii) Write a balanced equation for the reaction between ethanoic acid and NaOH.
- (iv) Hence calculate the amount, in moles, of NaOH that reacted with the ethanoic acid.

[4]

- (c) (i) Use your results from (b) to calculate the amount, in moles, of ethanoic acid present at equilibrium. Hence complete the table below.

For
Examiner's
Use

	$\text{CH}_3\text{CO}_2\text{H}$	ROH	$\text{CH}_3\text{CO}_2\text{R}$	H_2O
initial amount/mol	0.10	0.10	0	0
equilibrium amount/mol				

- (ii) Use your results to calculate a value for K_c for this reaction.

[3]

- (d) Esters are hydrolysed by sodium hydroxide. During the titration, sodium hydroxide reacts with ethanoic acid and the hydrogen chloride, but not with the ester.

Suggest a reason for this.

.....

..... [1]

- (e) What would be the effect, if any, on the amount of ester present if all of the water were removed from the flask and the flask kept for a further week at 25 °C?

Explain your answer.

.....

.....

..... [2]

[Total: 12]

- 2 Halogenoalkanes have been widely used as aerosol propellants, refrigerants and solvents for many years.

Fluoroethane, $\text{CH}_3\text{CH}_2\text{F}$, has been used as a refrigerant. It may be made by reacting ethene with hydrogen fluoride.

You are to calculate a value for the C–F bond energy in fluoroethane.

- (a) Use relevant bond energies from the *Data Booklet*, and the equation below to calculate a value for the bond energy of the C–F bond.

C–F bond energy = kJ mol^{-1} [4]

- (b) Another halogenoalkane which was used as a refrigerant, and also as an aerosol propellant, is dichlorodifluoromethane, CCl_2F_2 .

State **two** reasons why compounds such as $\text{CH}_3\text{CH}_2\text{F}$ and CCl_2F_2 have been used as aerosol propellants and refrigerants.

.....
 [2]

CCl_2F_2 is one of many chlorofluorocarbon compounds responsible for damage to the ozone layer in the stratosphere.

For
Examiner's
Use

- (c) By using relevant data from the *Data Booklet*, and your answer to (a) suggest why CCl_2F_2 is responsible for damage to the ozone layer in the stratosphere whereas $\text{CH}_3\text{CH}_2\text{F}$ is not.

.....

 [2]

Both $\text{CH}_3\text{CH}_2\text{F}$ and CCl_2F_2 are greenhouse gases.

The 'enhanced greenhouse effect' is of great concern to the international community.

- (d) (i) What is meant by the term *enhanced greenhouse effect*?

.....

- (ii) Water vapour is the most abundant greenhouse gas.

What is the second most abundant greenhouse gas?

..... [3]

A greenhouse gas which is present in very small amounts in the atmosphere is sulfur hexafluoride, SF_6 , which is used in high voltage electrical switchgear.

- (e) What shape is the SF_6 molecule?

..... [1]

[Total: 12]

- 3 Barium, proton number 56, is a Group II element which occurs in nature as the carbonate or sulfate.

The element was first isolated by Sir Humphry Davy in 1808.

Some reactions of barium and its compounds are shown in the reaction scheme below.

For
Examiner's
Use

- (a) State the formula of **each** of the barium compounds **R** to **W**.

R

S

T

U

V

W

[6]

- (b) (i) Write balanced equations for the following reactions.

compound **T** to compound **W**

.....

the roasting of **V** in air

.....

- (ii) Suggest a gaseous reagent for the conversion of **T** into **V** and write a balanced equation for the reaction.

reagent

equation [4]

- (c) Suggest the formula of an aqueous reagent, other than an acid, for reaction 1.

..... [1]

When barium is heated strongly in oxygen, an oxide **X** is formed.

The oxide **X** contains 18.9% of oxygen by mass.

The oxide **X** reacts with dilute sulfuric acid in a 1:1 ratio.

Two products, one insoluble and one soluble, are formed.

- (d) (i) Calculate the empirical formula of **X**.

- (ii) Suggest the identity of the solid **Y**.

.....

- (iii) Use your answers to (i) and (ii) to construct an equation for the reaction of **X** with H_2SO_4 .

..... [4]

[Total: 15]

BLANK PAGE

4 Chlorine is manufactured by electrolysis from brine, concentrated aqueous sodium chloride.

For
Examiner's
Use

- (a) (i) Describe, with the aid of a fully labelled diagram, the industrial electrolysis of brine in a diaphragm cell. State what each electrode is made of and show clearly the inlet for the brine and the outlets for the products.

- (ii) Write a half-equation, with state symbols, for the reaction at **each** electrode.

anode

cathode

- (iii) Name the chemical that is produced in solution in this electrolytic process.

.....

[7]

[Total: 7]

- 5 Although there are many different types of food eaten around the world, animal fats and/or vegetable oils are commonly used in cooking.

Animal fats and vegetable oils are usually glyceryl esters, that is esters of glycerol, propane-1,2,3-triol.

Many animal fats contain esters of stearic acid, $\text{CH}_3(\text{CH}_2)_{16}\text{CO}_2\text{H}$.

Vegetable oils often contain esters of oleic acid, $\text{CH}_3(\text{CH}_2)_7\text{CH}=\text{CH}(\text{CH}_2)_7\text{CO}_2\text{H}$.

- (a) Draw the structural formula of the glyceryl ester formed when one molecule of glycerol is completely esterified with stearic acid.

[1]

- (b) What reagent(s) would you use, in a school or college laboratory, to obtain a small sample of oleic acid, $\text{C}_{17}\text{H}_{33}\text{CO}_2\text{H}$, from the glyceryl ester present in a vegetable oil?

.....

[1]

Oleic acid is the *cis* isomer and elaidic acid the *trans* isomer of

- (c) By using this formula, draw the structural formula of elaidic acid, clearly showing the stereochemistry.

[1]

Oleic and elaidic acids are examples of mono-unsaturated acids.

Many vegetable oils contain esters of polyunsaturated fatty acids. Such oils are often hydrogenated to form esters containing saturated or mono-unsaturated fatty acids.

For
Examiner's
Use

(d) (i) Suggest the meaning of the term *polyunsaturated fatty acid*.

.....
.....

(ii) What reagent and condition(s) are used for the hydrogenation of an unsaturated fatty acid?

reagent

condition(s) [3]

In cooking, unsaturated fats are often oxidised to give aldehydes or ketones.

(e) (i) Give the structural formulae of the two aldehydes formed by the partial oxidation of the unsaturated fat below.

In the structure, X, represents the rest of the fat molecule.

(ii) Name the reagent you would use to show that the product contained **either** an aldehyde **or** a ketone. What change would be seen?

reagent

observation

(iii) What reagent would you use to **confirm** the presence of an aldehyde? What change would be seen?

reagent

observation [6]

Animal fats and vegetable oils can become rancid because of oxidation. The rancid fat or oil has an unpleasant smell and taste.

For
Examiner's
Use

Antioxidants are used to prevent the spoilage of many foodstuffs by oxidation.

One antioxidant that is widely used is vitamin C, ascorbic acid.

ascorbic acid

- (f) (i) How many chiral carbon atoms are present in one molecule of ascorbic acid?
If none, write 'none'.

.....

- (ii) The ascorbic acid molecule contains three functional groups.

Two of these are alcohol (primary and secondary) and alkene.

What is the name of the third functional group?

.....
