## UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Subsidiary Level and GCE Advanced Level

## MARK SCHEME for the October/November 2009 question paper for the guidance of teachers

## 9702 PHYSICS

9702/34

Paper 34 (Advanced Practical Skills 2), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2009 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

	Page 2			Mark Scheme: Teachers' version	Syllabus	Paper
				GCE A/AS LEVEL – October/November 2009	9702	34
1	(b)	Valu	e for	$V_0$ in range 1.3 to 1.7V, with unit		[1]
	(c)	(ii)	First	value of $V$ less than $V_0$		[1]
	(d)	No h	nelp f	from Supervisor (-1 for minor help, -2 for major help)		[2]
	(d)	Six s	sets o	ments table of readings of $R$ and $V$ scores 3 marks, five sets score end in table then $-1$ .	s 2 marks etc.	[3]
	(d)	Tabl Valu		ange f $R$ must include one of 100/220 $\Omega$ and one of 3300/4	700Ω.	[1]
	(d)	Each Ther	n col re mi	olumn headings umn heading must contain a quantity and a unit where ust be some distinguishing mark between the quantity nits in the body of the table. R/(1000+R) has no unit.		[1]
	(d)			onsistency of presentation of raw readings. s of raw <i>V</i> must be given to the same number of decim	nal places.	[1]
	(d)	Che	ck th	calculated values be specified value of <i>R/(1000+R)</i> is calculated correctly ct, write in the correct value. Ignore rounding errors.		[1]
	(d)	S.f. 1	for 1	ignificant figures /V must be the same as, or one more than, s.f. for raw ach row in the table.	V.	[1]
	(e)		Sens allow the g	ph) Axes – sible scales must be used. Awkward scales (e.g. 3:10) yed. Scales must be chosen so that the plotted points graph grid in both <i>x</i> and <i>y</i> directions. Scales must be lated. Ignore units. Allow inverted axes, –1 wrong quantiting squares between scale markings.	occupy at least hobelled with the q	uantity
			All o	ph) Plotting – bservations must be plotted. Ring and check a suspect f correct. Re-plot if incorrect. Plots should be no more ect position in x or y direction. Diameter must be less there.	than 1/2 a small s	
	(e)		At le Judg scatt	ph) Line of best fit – ast 5 trend plots are needed. ge by scatter of points about the candidate's line. There ter of points either side of the line. Indicate best line if o of the best line. If trend curved allow a smooth drawn c	candidate's line	[1] line.
			Àll ta	ph) Quality of results – able points must be plotted (minimum of 5 needed). Ju lots which must be within $\pm$ 0.02 V $^{-1}$ of assessors line		[1]

Page 3		ge 3	Mark Scheme: Teachers' version	Syllabus	Paper	
			GCE A/AS LEVEL – October/November 2009	9702	34	
	(e) (iii) (e) (iii)		Gradient – The hypotenuse of the $\Delta$ must be at least half the length of the drawn line. Both read-offs must be accurate to half a small square. Check for $\Delta y / \Delta x$ . Check sign is consistent with trend.			
			Intercept – Correctly read-off from graph (indicate a false origin) or the method of calculation is correct (check substitution of point on line).			
	(f) Meth		nod of calculation of <i>P</i> is correct with gradient and interce <sub>l</sub>	ot values used.	[1]	
	` '		lue for $P$ in range 630 to 730 $\Omega$ , with unit. bstitution loses both marks.			
					[Total: 20]	
2	(c)	(i) \	Value of $l$ < 25cm, with unit.		[1]	
	(c)	(i) l	<i>l</i> to nearest mm.		[1]	
	(c) (	iii) E	Evidence of repeated measurements of $h_{final}$		[1]	
	(c) (	iii) \	Value of $h_{final}$ in range 5.0 to 50.0 cm.		[1]	
	(d) Percentage uncertainty in $h_{\rm final}$ . If repeated readings have been done then the uncertainty could be half the range, absolute uncertainty must be in range 2 mm to 20 mm. Correct ratio idea required.		[1] ge, otherwise			
	(e)	$E_p$ to	no more than 3 s.f.		[1]	
	(e)	Value	e for $E_p$ consistent with unit.		[1]	
	(f)	Seco	and value of $\it l$ greater than first value.		[1]	
	(f)	Seco	ond value of $h_{\mathrm{final}}$		[1]	
	(f)	Seco	and value of $h_{final}$ shows correct trend (i.e. $l \uparrow h \uparrow$ or $l \downarrow$	<i>h</i> ↓).	[1]	
	(g)	Chec	ck calculation of the two values of $E_{ m p}\!$		[1]	
	(g)		d conclusion based on the calculated values. Consistent ved criterion.	vith 20% or with c	andidate's [1]

	GCE A/AS LEVEL – October/November 2009	9702	34

(h)\_\_\_\_

	Limitation (4 max)	Improvement (4 max)
А	Two sets of readings are not enough / only two sets	Take more readings <u>and</u> plot a graph
В	Difficult to take measurements (h/l) because the ruler moves / is not vertical	Clamp rule / ensure rule is vertical using a set square on the bench
С	Change in properties / deterioration of the thread due to repeated drops	Use a new thread each time
D	Poor accuracy due to size of increment / only note measured $h_{\rm final}$ values not the values between.	Use smaller increments
Е	Obtaining constant loop length for repeats at one value of loop length / variation in $h_{\text{final}}$ values for repeats at one loop length	Sensible method to ensure constant loop length for repeats
F	Tangling cotton	

Do not allow 'repeated readings', centres of mass, or nail, knots, time ideas.

Do not allow use of video, 'use a computer to improve experiment', sensors.

Do not allow amount of tape/plasticine/glue, thinner/thicker thread, fans.

Do not allow 'eye level'.
