## **CAMBRIDGE INTERNATIONAL EXAMINATIONS**

GCE Advanced Subsidiary Level and GCE Advanced Level

## MARK SCHEME for the May/June 2013 series

## 9702 PHYSICS

9702/31

Paper 3 (Advanced Practical Skills 1), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Page 2			Wark Scheme	Syllabus	Paper	
			GCE AS/A LEVEL – May/June 2013	9702	31	
(a)	Valu	ie of <i>L</i>	in the range 0.790–0.810 m.		[1]	
(c)	(ii)	Value	e of $d$ to the nearest mm and $d < 0.600$ m.		[1]	
(d)	(d) Six sets of readings of <i>m</i> and <i>d</i> scores 5 marks, five sets scores 4 marks etc.  Correct trend is <i>d</i> decreases as <i>m</i> increases.  Help from Supervisor –1.					
	Range of $m$ : $m_{min} = 0$ g or $10$ g; $m_{max} \ge 100$ g.					
			eadings:		[1]	
	Each column heading must contain a quantity and a unit.  The presentation of quantity and unit must conform to accepted scientific convention e.g. 1/d/m <sup>-1</sup> .					
	Consistency: All values of $d$ must be given to the nearest mm.					
	Significant figures: Significant figures for every row of values of $1/d$ same as, or one greater than, $d$ as recorded in table.					
		culatio les of	on: 1/d calculated correctly.		[1]	
(e)	( )	Scale grid in Scale	: ible scales must be used, no awkward scales (e.g. 3:10 es must be chosen so that the plotted points occupy at a both x and y directions. es must be labelled with the quantity that is being plotte es markings should be no more than three large squares	east half the g	[1] raph	
		Plottii All ob Diam	ng of points: eservations in the table must be plotted. eter of plotted points must be ≤ half a small square (no to an accuracy of half a small square.		[1]	
			ty: bints in the table must be plotted (at least 5) for this manual er of points must be less than $\pm$ 0.05 m <sup>-1</sup> of 1/d from a second content of 1/d from 1/d fro		[1] ed.	
	` ,	Judge There Allow	of best fit:  e by balance of all points on the grid about the candida  e must be an even distribution of points either side of the  one anomalous point only if clearly indicated (i.e. circle  date. Line must not be kinked or thicker than half a sm	e line along the ed or labelled)	e full length.

	GCE AS/A LEVEL – May/June 201	3 9702	31			
(iii)	(iii) Gradient: The hypotenuse of the triangle must be at least half the length of the drawn line. Both read-offs must be accurate to half a small square in both the x and y direction. The method of calculation must be correct.					
	<i>y</i> –intercept: Either:		[1			
	Correct read-off from a point on the line and subst Read-off must be accurate to half a small square i Or: Correct read-off of the intercept directly from the g	in both x and y directions.				
	e of $P$ = candidate's gradient. Value of $Q$ = candid for $P$ (e.g. $kg^{-1}$ m <sup>-1</sup> ) and $Q$ (m <sup>-1</sup> ).	late's intercept.	[1			
(g) Valu	e of <i>k</i> in range 1.0–2.0.		[1			
			[Total: 20]			
(a) (ii)	Value of $\theta$ with unit. Help from Supervisor –1. $\theta$ in range 72°–92°.		[1 [1			
(iii)	Absolute uncertainty in $\theta$ in range 2°–10°. If repeated readings have been taken, then the un NOT zero if values are equal). Correct method of uncertainty.					
(iv)	Correct calculation of sin $ heta$ . Ignore unit. Do not allonot a right-angled triangle.	ow sin $\theta$ = O/H ideas as tr	iangle [1			
` '	e of $T$ with unit in range $1.0 \le T \le 2.0$ s. ence of repeats here or in <b>(c)(ii)</b> .		[1 [1			
(c) (ii)	Second value of $\theta$ . Second value of $T$ . Second value of $T$ < first value of $T$ .		[1] [1]			
(d) (i)	Two values of <i>k</i> calculated correctly.		[1			
(ii)	Justification of s.f. in $k$ linked to significant figures	in $T$ (or $t$ ) and $\theta$ .	[1			
(iii)	Sensible comment relating to the calculated value specified by the candidate.	s of <i>k</i> , testing against a c	riterion [1

(e)

	(i) Limitations max. 4	(ii) Improvements max. 4	Do not credit
A	two readings not enough (to draw a conclusion)	take more readings <u>and</u> plot a graph/ calculate more <i>k</i> values and <u>compare</u>	"repeat readings" on its own /few readings/only one reading /take more readings and (calculate) average k
В	end of nail slips in bracket/bracket moves/is not stable	use something with a sharper point e.g. cocktail stick/dent in bracket (to seat head of nail)  valid method to fix bracket e.g. use blu-tack/glue/use bigger/heavier bracket/fix bracket/ clamp to bench	method of fixing nail
С	difficult to measure <i>T</i> with reason e.g. heavily damped/oscillations die away quickly		'too few oscillations' on its own/ T small
D	difficult to judge start of/end of/complete oscillation	use a fixed/fiducial marker /improved timing method e.g. video with timer/video and view frame-by-frame multiflash photography with strobe rate	human error/ reaction time /record time for more oscillations  marker fixed to rod /marker placed at extreme of oscillation  use light gate
E	difficult to read <i>θ</i> /angle/protractor with reason e.g. difficult to hold steady in the air	clamp protractor	parallax error use a larger protractor
F	fans/air conditioning affect oscillations
