UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Subsidiary Level and GCE Advanced Level

MARK SCHEME for the October/November 2009 question paper for the guidance of teachers

9702 PHYSICS

9702/31

Paper 31 (Advanced Practical Skills 1), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2009 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

,		GC	E A/AS LEVEL – October/November 2009	9702	31
(a)	First	values for	<i>h</i> and <i>z,</i> to the nearest mm.		[1]
(b)	Measurements – Add up the number of sets of values of z and h and put a ringed total by the table. Four marks for six sets of readings of z and h , three for five sets, etc. (–1 if help given by supervisor, -1 if wrong trend i.e. $h^\uparrow z^\downarrow$)			ed total [4]	
	Maximum value for z - h greater than 6.0 cm			[1]	
	Each Ignor There	e units in t must be s	gs eading must contain a quantity and a unit where he body of the table. some distinguishing mark between the quantity xpected, but accept, for example, h (mm)).		[1]
			presentation of raw readings of h and z must be given to the same number of	decimal places.	[1]
(c)	ti s	cale mark cales mus ne graph g cales mus	exacts axes be used. Awkward scales (e.g. 3:10) ings should be no more than 3 large squares ago to be chosen so that the plotted points occupy a rid in both x and y directions. Set be labelled with the quantity being plotted. Ign sed axes but do not allow the wrong graph.	oart. t least half	[1]
	F V	ll observa ling and cl Vork to an	Plotting tions must be plotted. Put a ringed total of plotteneck a suspect plot. Tick if correct. Re-plot if incapacuracy of half a small square. lobs' – dia. of plots must be < ½ a small square.	correct.	[1]
) T	udge by so here must	ine of best fit catter of at least 5 trend points about the candid be a fair scatter of points either side of the line st line if candidate's line is not the best line.		[1]
) A	udge by so Il points in	Quality of results catter of points about the best fit line. In the table (of which there must be at least 5) must be conducted to the conduction on the haxis.	ust be	[1]
	`´ T F v	tead-offs r alue.	nuse must be at least half the length of the drawnust be accurate to half a small square. If incorray/ $\Delta y/\Delta x$ (i.e. do not allow $\Delta x/\Delta y$).		[1] correct [1]

1

(d)	(i)	Raw value(s) for d to nearest 0.1 mm or 0.01 mm 18.00 mm $\leq d \leq$ 27.00 mm. Unit required. Repeated readings for d .	[1] [1]
	(ii)	A calculated correctly. Allow ecf. Check value. If incorrect, write in the correct value.	[1]
		Significant figures for A must be the same as, or one more than, the sig. figs. of the raw values of d.	[1]
(e)	Sub Cal (or	thod – <u>value</u> from (c) (ii) equated to $k/\rho Ag + 1$ ostitution methods lose both (e) marks culation - value for k in range 4 to 6 Nm ⁻¹ .(allow $3.50 \le k \le 6.49$). refer to supervisor's value). Unit required. Ignore SF. s mark is conditional on achieving the previous mark.	[1] [1]

	GCE A/AS LEVEL – October/November 2009	9702	31

(f) Identifying limitations and suggesting improvements:

	(f) (i) Limitations/ sources of error (max 4 marks)	(f) (ii) Improvements (max 4 marks))	Ignore:
Α	Only two readings/two readings are not enough (to draw a valid conclusion)	Take more readings and plot a graph/calculate more k values	repeat readings
В	Hard to measure <i>d</i> because ball moves too quickly/ too fast/only stationary for short time	Use video and play back slowly/ frame by frame Use slow motion camera Use position sensor/motion sensor Allow light gates, adjusting position until beam interrupted	Use a high-speed camera/computer/data logger
С	Difficulty in releasing marble consistently/ from rest/without applying a force	Description of a mechanism to release marble e.g. slot in tube + card	Change angle
D	Parallax error in measurement of d	Description of method of reducing parallax error requiring additional equipment e.g. shadow projection	view at eye level view from above use a marker
E	Incorrect alignment/ inconsistent collisions/ different paths down tube	Use narrower tube	
F	Motion of ball affected by air movement/ ball swings around	Turn off fans/air con. Shield from draughts	Use a closed room/vacuum refs to air resistance heavier ball
G	Difficult to measure <i>l</i> because it is hard to judge the position of the centre of the ball	Measure diameter of ball using vernier calipers Measure <i>l</i> to top and bottom of ball and average.
