Paper 2 AS Structured Questions

May/June 2008

1 hour 15 minutes

Candidates answer on the Question Paper.

Additional Materials: Data Booklet

READ THESE INSTRUCTIONS FIRST

Write your name, Centre number and candidate number on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs, or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

You may lose marks if you do not show your working or if you do not use appropriate units.

A Data Booklet is provided.

The number of marks is given in brackets [] at the end of each question or part question.

At the end of the examination, fasten all your work securely together.

DO NOT WRITE IN THE GREY AREAS BETWEEN THE PAGES.

For Exam	iner's Use

Total	

This document consists of 10 printed pages and 2 blank pages.

Answer all the questions in the spaces provided.

For Examiner's Use

1 The structural formulae of water, methanol and methoxymethane, CH₃OCH₃, are given below.

(a) (i) How many lone pairs of electrons are there around the oxygen atom in methoxymethane?

(ii) Suggest the size of the C-O-C bond angle in methoxymethane.

The physical properties of a covalent compound, such as its melting point, boiling point, vapour pressure, or solubility, are related to the strength of attractive forces between the molecules of that compound.

These relatively weak attractive forces are called intermolecular forces. They differ in their strength and include the following.

- A interactions involving permanent dipoles
- B interactions involving temporary or induced dipoles
- C hydrogen bonds
- (b) By using the letters **A**, **B**, or **C**, state the **strongest** intermolecular force present in **each** of the following compounds.

For each compound, write the answer on the dotted line.

ethanal	CH ₃ CHO	
ethanol	CH ₃ CH ₂ OH	
methoxymethane	CH ₃ OCH ₃	
2-methylpropane	(CH ₂) ₂ CHCH ₂	 [4]

(c)	Met	chanol and water are completely soluble in each other.	For
	(i)	Which intermolecular force exists between methanol molecules and water molecules that makes these two liquids soluble in each other?	Examiner's Use
	(ii)	Draw a diagram that clearly shows this intermolecular force. Your diagram should show any lone pairs or dipoles present on either molecule that you consider to be important.	
		[4]	
(d)		en equal volumes of ethoxyethane, $\mathrm{C_2H_5OC_2H_5}$, and water are mixed, shaken, and allowed to stand, two layers are formed.	
	Sug	gest why ethoxyethane does not fully dissolve in water. Explain your answer.	
		[2]	
		[Total: 12]	

2 The Periodic Table we currently use is derived directly from that proposed by Mendeleev in 1869 after he had noticed patterns in the chemical properties of the elements he had studied.

For Examiner's Use

The diagram below shows the first ionisation energies of the first 18 elements of the Periodic Table as we know it today.

(a)	Give	e the equ	ation,	inclu	ding s	state symb	ols, for th	ne fir	rst ionisatio	n ene	ergy o	of fluoi	rine.	
													[2]
(b)	Exp	•	there	is a	gen	eral increa	ase in fir	st ic	onisation er	nergi	es fro	om so	dium	to
													[3]
(c)	(i)	Explain magnes	-	the	first	ionisation	energy	of	aluminium	is	less	than	that	of

© UCLES 2008 9701/02/M/J/08

For Examiner's Use

(ii)	Explain why th	e first ionisation	on energy of s	ulphur is less	than that of p	hosphorus.		
						[4]		
The table	below refers t	o the element	s sodium to su	ılphur and is iı	ncomplete.			
element	Na	Mg	Al	Si	Р	S		
melting point		high						
conductivity		high						
(d) (i)	Complete the	melting point'	row by using o	only the word	s 'high' or 'low	ı'		
	•		row by using o					
	(e) When Mendeleev published his Periodic Table, the elements helium, neon and argon were not included.							
Sugg	Suggest a reason for this.							
						[1]		
						[Total: 15]		

3	laborat	hydrocarbons such as petrol or paraffin wax are burned in an excess of air in a ory, carbon dioxide and water are the only products. Detrol is burned in a car engine, nitrogen monoxide, NO, is also formed.
		plain how NO is formed in an internal combustion engine but not formed when a nall sample of petrol is burnt in an evaporating basin.
		rea
	•••	[2]
		igines of modern motor cars have exhaust systems which are fitted with catalytic ters in order to reduce atmospheric pollution from substances such as NO.
	(b) (i)	State three more pollutants, other than ${\rm CO_2}$ and ${\rm H_2O}$, that are present in the exhaust gases of a car engine.
		and and and
	(ii)	What is the active material present in the catalytic converter?
	(iii)	Write one balanced equation to show how NO is removed from the exhaust gases

NO is also formed when nitrosyl chloride, NOC \it{l} , dissociates according to the following equation.

$$2\mathsf{NOC}\,l(\mathsf{g}) \Longrightarrow 2\mathsf{NO}(\mathsf{g}) + \mathsf{C}\,l_2(\mathsf{g})$$

Different amounts of the three gases were placed in a closed container and allowed to come to equilibrium at 230 °C. The experiment was repeated at 465 °C.

The equilibrium concentrations of the three gases at each temperature are given in the table below.

	concentration / mol dm ⁻³				
temperature /°C	NOC1	NO	Cl_2		
230	2.33×10^{-3}	1.46 × 10 ⁻³	1.15 × 10 ⁻²		
465	3.68×10^{-4}	7.63×10^{-3}	2.14×10^{-4}

[4]

(c)	(i)	Write the expression for the equilibrium constant, K_c , for this reaction. Give the units.	For xaminer Use
	(ii)	Calculate the value of K_c at each of the temperatures given. 230 °C	
		465°C	
	(iii)	Is the forward reaction endothermic or exothermic? Explain your answer.	
		[5]	
(d)		temperature of the equilibrium was then altered so that the equilibrium centrations of NOC l and NO were the same as each other.	
		at will be the effect on the equilibrium concentration of NOC1 when the following nges are carried out on this new equilibrium? In each case, explain your answer.	
	(i)	The pressure of the system is halved at constant temperature.	
	(ii)	A mixture of NOC <i>l</i> (g) and NO(g) containing equal numbers of moles of each gas is introduced into the container at constant temperature.	
		[4]

Dra	w displayed formulae for		
(i)	two structural isomers of C ₂ H ₄ Br ₂	,	
	D	E	
(ii)	the cis- and the trans- isomers of 0	C ₂ H ₂ Br ₂ .	
	cis	trans	[4]
	The <i>cis</i> - isomer of C ₂ H ₂ Br ₂ can be C ₂ H ₄ Br ₂ . State the reagent(s) and	e converted into one of the structions you would use to do to	etural isomers of
(i) (ii)	The <i>cis</i> - isomer of C ₂ H ₂ Br ₂ can be C ₂ H ₄ Br ₂ . State the reagent(s) and Which of your structural isomers, I	e converted into one of the structions you would use to do to	etural isomers of
(ii)	The <i>cis</i> - isomer of C ₂ H ₂ Br ₂ can be C ₂ H ₄ Br ₂ . State the reagent(s) and	e converted into one of the structions you would use to do to	etural isomers of
	The <i>cis</i> - isomer of C ₂ H ₂ Br ₂ can be C ₂ H ₄ Br ₂ . State the reagent(s) and Which of your structural isomers, I	e converted into one of the structions you would use to do	etural isomers of this.

5 Ethanedial (glyoxal) is used in the production of fabrics which have permanent creases.

For Examiner's Use

Ethanedial undergoes many of the reactions of aldehydes.

(a) Ethanedial reacts with Tollens' reagent.

(i) What would you see if you carried out this reaction?
--

(ii) What is the structural formula of the organic compound formed?

[2]

- **(b)** Ethanedial reacts with hydrogen cyanide, HCN, to give compound **F**.
 - (i) What is the structural formula of **F**?

(ii) What type of reaction is this?

(iii) What is the structural formula of the compound formed when **F** is heated with an aqueous mineral acid such as dilute sulphuric acid?

[3]

© UCLES 2008 9701/02/M/J/08

(c)	Eth	anedial can be oxidised and reduced.	For
	(i)	What is the structural formula of the organic compound formed when ethanedial is heated under reflux with an excess of acidified potassium dichromate(VI)?	Examiner's Use
	(ii)	What is the structural formula of the compound formed when ethanedial is reduced?	
	(iii)	What reagent would be used for this reduction?	
		[3]	
(d)		en ethanedial is reacted with NaOH and the product treated with a mineral acid such dilute sulphuric acid, the following reaction sequence takes place.	
		I CHOCHO + NaOH \rightarrow HOCH $_2$ CO $_2$ Na	
		$\label{eq:hoch2co2} \text{II} \text{HOCH}_2\text{CO}_2\text{Na} \ + \ \text{H}^+ \ \rightarrow \ \text{HOCH}_2\text{CO}_2\text{H} \ + \ \text{Na}^+$	
	Wh	at type of reaction is the overall change?	
		[1]	
(e)	An	isomer of ethanedial exists which reacts with sodium metal to give hydrogen.	
	Su	ggest the displayed formula of this isomer.	
		[2]	
		[Total: 11]
