#### **CAMBRIDGE INTERNATIONAL EXAMINATIONS**

GCE Advanced Subsidiary Level and GCE Advanced Level

# MARK SCHEME for the May/June 2013 series

## 9709 MATHEMATICS

**9709/31** Paper 3, maximum raw mark 75

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

	GCE AS/A LEVEL – May/June 2013	9709	31

### Mark Scheme Notes

Marks are of the following three types:

- M Method mark, awarded for a valid method applied to the problem. Method marks are not lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, e.g. by substituting the relevant quantities into the formula. Correct application of a formula without the formula being quoted obviously earns the M mark and in some cases an M mark can be implied from a correct answer.
- A Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated method mark is earned (or implied).
- B Mark for a correct result or statement independent of method marks.
- When a part of a question has two or more "method" steps, the M marks are generally independent unless the scheme specifically says otherwise; and similarly when there are several B marks allocated. The notation DM or DB (or dep\*) is used to indicate that a particular M or B mark is dependent on an earlier M or B (asterisked) mark in the scheme. When two or more steps are run together by the candidate, the earlier marks are implied and full credit is given.
- The symbol √ implies that the A or B mark indicated is allowed for work correctly following on from previously incorrect results. Otherwise, A or B marks are given for correct work only. A and B marks are not given for fortuitously "correct" answers or results obtained from incorrect working.
- Note: B2 or A2 means that the candidate can earn 2 or 0.
  B2/1/0 means that the candidate can earn anything from 0 to 2.

The marks indicated in the scheme may not be subdivided. If there is genuine doubt whether a candidate has earned a mark, allow the candidate the benefit of the doubt. Unless otherwise indicated, marks once gained cannot subsequently be lost, e.g. wrong working following a correct form of answer is ignored.

- Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise.
- For a numerical answer, allow the A or B mark if a value is obtained which is correct to 3 s.f., or which would be correct to 3 s.f. if rounded (1 d.p. in the case of an angle). As stated above, an A or B mark is not given if a correct numerical answer arises fortuitously from incorrect working. For Mechanics questions, allow A or B marks for correct answers which arise from taking *g* equal to 9.8 or 9.81 instead of 10.

Page 3	Mark Scheme	Syllabus	Paper
	GCE AS/A LEVEL – May/June 2013	9709	31

The following abbreviations may be used in a mark scheme or used on the scripts:

AEF	Any Equivalent Form (of answer is equally acceptable)
AG	Answer Given on the question paper (so extra checking is needed to ensure that the detailed working leading to the result is valid)
BOD	Benefit of Doubt (allowed when the validity of a solution may not be absolutely clear)
CAO	Correct Answer Only (emphasising that no "follow through" from a previous error is allowed)
CWO	Correct Working Only – often written by a 'fortuitous' answer
ISW	Ignore Subsequent Working
MR	Misread
PA	Premature Approximation (resulting in basically correct work that is insufficiently accurate)
sos	See Other Solution (the candidate makes a better attempt at the same question)
SR	Special Ruling (detailing the mark to be given for a specific wrong solution, or a case where some standard marking practice is to be varied in the light of a particular circumstance)

### **Penalties**

- MR −1 A penalty of MR −1 is deducted from A or B marks when the data of a question or part question are genuinely misread and the object and difficulty of the question remain unaltered. In this case all A and B marks then become "follow through \nothin" marks. MR is not applied when the candidate misreads his own figures this is regarded as an error in accuracy. An MR −2 penalty may be applied in particular cases if agreed at the coordination meeting.
- PA –1 This is deducted from A or B marks in the case of premature approximation. The PA –1 penalty is usually discussed at the meeting.

		GCE AS/A LEVEL – May/June 2013	9709	31	
1	Carry out division or equivalent at least as far as two terms of quotient				
	Obtain quotient $2x-4$ Obtain remainder 8				[2]
	Obtain remair	ider 8		A1	[3]
2	Obtain $1-x$ a	s first two terms of $(1+2x)^{-\frac{1}{2}}$		В1	
	Obtain $+\frac{3}{2}x^2$	or unsimplified equivalent as third term of $(1+2x)^{-\frac{1}{2}}$		B1	
	Multiply 1+3.	x by attempt at $(1+2x)^{-\frac{1}{2}}$ , obtaining sufficient terms		M1	
		nswer $1 + 2x - \frac{3}{2}x^2$		A1	[4]
2	G	A Bx + C		D1	
3	State or imply	correct form $\frac{A}{x} + \frac{Bx + C}{x^2 + 1}$		B1	
	•	ant method to find at least one constant		M1	
	Obtain $A = 2$			A1	
	Obtain $B = 5$ Obtain $C = -3$			A1 A1	[5]
					L- J
4	(i) <u>Either</u>	State or imply non-modular equation $(4x-1)^2 = (x-3)^2$ or pair	of		
		linear equations $4x-1=\pm(x-3)$		B1	
		Solve a three-term quadratic equation or two linear equations		M1	
		Obtain $-\frac{2}{3}$ and $\frac{4}{5}$		A1	
	<u>Or</u>	Obtain value $-\frac{2}{3}$ from inspection or solving linear equation		B1	
		Obtain value $\frac{4}{5}$ similarly		B2	[3]
	(ii) State or i	mply at least $4^y = \frac{4}{5}$ , following a positive answer from part (i)		В1√	
	Apply lo	garithms and use $\log a^b = b \log a$ property		M1	
		0.161 and no other answer		A1	[3]
5	(i) Use corre	ect quotient rule or equivalent		M1	
	Obtain (	$\frac{1 + e^{2x})2x - (1 + x^2)2e^{2x}}{(1 + e^{2x})^2}$ or equivalent		A1	
	Substitut	e $x = 0$ and obtain $-\frac{1}{2}$ or equivalent		A1	[3]

			GCE AS/A LEVEL – May/June 2013	9709	31	
		Substitute	e $x = 0$ , $y = 2$ to obtain $-\frac{5}{6}$ or equivalent following correct w	ork	B1	[4]
6	(i)		mply $\underline{A}$ is $(1, 4, -2)$		B1	
			mply $\overline{QP} = 12\mathbf{i} + 6\mathbf{j} - 6\mathbf{k}$ or equivalent		B1	
			as normal and A as mid-point to find equation of plane $2x + 6y - 6z = 48$ or equivalent		M1 A1	[4]
			•			
	(ii)	<u>Either</u>	State equation of <i>PB</i> is $\mathbf{r} = 7\mathbf{i} + 7\mathbf{j} - 5\mathbf{k} + \lambda \mathbf{i}$		B1	
			Set up and solve a relevant equation for $\lambda$ .		M1	
			Obtain $\lambda = -9$ and hence B is $(-2, 7, -5)$ Use correct method to find distance between A and B.		A1 M1	
			Obtain 5.20		A1	
		<u>Or</u>	Obtain 12 for result of scalar product of <i>QP</i> and <b>i</b> or equivale. Use correct method involving moduli, scalar product and cost		B1	
			to find angle APB		M1	
			Obtain 35.26° or equivalent		A1	
			Use relevant trigonometry to find <i>AB</i> Obtain 5.20		M1 A1	[ <b>5</b> ]
			Obtain 5.20		Al	[5]
7	(a)	State or i	mply $3a + 3bi + 2i(a - bi) = 17 + 8i$		B1	
			real and imaginary parts to obtain two linear equations in $a$ are	$\operatorname{ad} b$	M1*	
			o simultaneous linear equations for a or b		M1 (dep*)	Γ <i>4</i> 3
		Obtain 7	- <i>2</i> 1		A1	[4]
	(b)	<u>Either</u>	Show or imply a triangle with side 2		B1	
			State at least two of the angles $\frac{1}{4}\pi, \frac{2}{3}\pi$ and $\frac{1}{12}\pi$		B1	
			State or imply argument is $\frac{1}{4}\pi$		B1	
			Use sine rule or equivalent to find $r$		M1	
			Obtain $6.69e^{\frac{1}{4}\pi i}$		A1	
		<u>Or</u>	State $y = x$ .		B1	
			State $y = \frac{1}{\sqrt{3}}x + 2$ or $\frac{\sqrt{3}}{2} = \frac{x}{\sqrt{x^2 + (y - 2)^2}}$ or $\frac{1}{2} = \frac{y - 2}{\sqrt{x^2 + (y - 2)^2}}$	2)2	B1	
			State or imply argument is $\frac{\pi}{4}$		B1	
			Solve for $x$ or $y$ .		M1	
			Obtain $6.69e^{\frac{1}{4}\pi i}$		A1	[5]
8	(a)	Carry out	integration by parts and reach $ax^2 \ln x + b \int_{\frac{1}{2}}^{\frac{1}{2}} x^2 dx$		M1*	
	` /		$\int_{2}^{\infty} x^{2} \ln x - \int_{\frac{1}{x}}^{\infty} 2x^{2} dx$		A1	
		Obtain $2x^2 \ln x - x^2$			A1	
		Use limits, having integrated twice			M1 (dep*)	
			given result 56ln2-12		A1	[5]
						_

Page 6		Mark Scheme	Syllabus	Paper	
		GCE AS/A LEVEL – May/June 2013	9709	31	
(b)	State or i	$mply \frac{du}{dx} = 4\cos 4x$		B1	
		•		M1	
	Obtain $\int (\frac{1}{4} - \frac{1}{4}u^2) du$ or equivalent			A1	
	Integrate to obtain form $k_1u + k_2u^3$ with non-zero constants $k_1, k_2$			M1	
	Use appro	opriate limits to obtain $\frac{11}{96}$		A1	[5]
(i)	State or i	mply $R = 5$		B1	
		· · · · · · · · · · · · · · · · · · ·		M1	
	Obtain $\alpha$	=0.6435		A1	[3]
(ii)				M1	
				A1	[4]
	<b>(b)</b> Exp	ress integrand as $k \sec^2(\theta - \text{their } \alpha)$ for any constant $k$		M1	
	Integ	grate to obtain result $k \tan(\theta - \text{their } \alpha)$		<b>A</b> 1	
	Obta	$\sin \text{ correct answer } 2\tan(\theta - 0.6435)$		A1	[3]
(i)	State $\frac{dV}{dt}$ =	=80-kV		B1	
	-	· · ·		M1 M1*	
	Obtain -	$\frac{1}{k}\ln(80-kV) = t$ or equivalent		A1	
	Use $t = 0$	and $V = 0$ to find constant of integration or as limits	]	M1 (dep*)	
	Obtain -	$\frac{1}{k}\ln(80 - kV) = t - \frac{1}{k}\ln 80 \text{ or equivalent}$		A1	
	Obtain gi	ven answer $V = \frac{1}{k} (80 - 80e^{-kt})$ correctly		A1	[7]
(ii)				M1	
	Show suf	ficient iterations to 4 s.f. to justify answer to 2 s.f. or show a si	ign		
	change in	the interval (0.135, 0.145)		A1	[3]
(iii)				B1	
			ween	B1	[2]
	(i) (ii) (iii)	(i) State or in Carry out Obtain $\int_{0}^{1}$ Integrate Use approached in $\alpha$ (ii) State or in Use releve Obtain $\alpha$ (iii) (a) Carrobta Carrobta Carrobta Carrobta Obtain $\alpha$ (b) Expunite State $\frac{dV}{dt} = \frac{dV}{dt} = \frac$	<ul> <li>(b) State or imply dw/dx = 4cos 4x Carry out complete substitution except limits Obtain ∫(1/4 - 1/4 u²) du or equivalent Integrate to obtain form k₁u + k₂u³ with non-zero constants k₁, k₂ Use appropriate limits to obtain 1/96</li> <li>(i) State or imply R = 5 Use relevant trigonometry to find α Obtain α = 0.6435</li> <li>(ii) (a) Carry out appropriate method to find one value in given range Obtain 1.80 Carry out appropriate method to find second value in given range Obtain 5.77 and no other value</li> <li>(b) Express integrand as k sec²(θ - their α) for any constant k Integrate to obtain result k tan(θ - their α) Obtain correct answer 2 tan(θ - 0.6435)</li> <li>(i) State dw/dx = 80 - kV Correctly separate variables and attempt integration of one side Obtain a ln(80 - kV) = t or equivalent Obtain - 1/k ln(80 - kV) = t or equivalent Use t = 0 and V = 0 to find constant of integration or as limits Obtain - 1/k ln(80 - kV) = t - 1/k ln 80 or equivalent Obtain given answer V = 1/k (80 - 80e<sup>-kt</sup>) correctly</li> <li>(ii) Use iterative formula correctly at least once Obtain final answer 0.14 Show sufficient iterations to 4 s.f. to justify answer to 2 s.f. or show a schange in the interval (0.135, 0.145)</li> <li>(iii) State a value between 530 and 540 cm³ inclusive</li> </ul>	<ul> <li>(b) State or imply dw/dx = 4 cos 4x Carry out complete substitution except limits Obtain ∫(1/4 - 1/4 u²) du or equivalent Integrate to obtain form k₁u + k₂u² with non-zero constants k₁, k₂ Use appropriate limits to obtain 1/106</li> <li>(i) State or imply R = 5 Use relevant trigonometry to find α Obtain α = 0.6435</li> <li>(ii) (a) Carry out appropriate method to find one value in given range Obtain 1.80 Carry out appropriate method to find second value in given range Obtain 5.77 and no other value</li> <li>(b) Express integrand as k sec²(θ - their α) for any constant k Integrate to obtain result k tan(θ - their α) Obtain correct answer 2 tan(θ - 0.6435)</li> <li>(i) State dw/dx = 80 - kV Correctly separate variables and attempt integration of one side Obtain -1/2 ln(80 - kV) = t or equivalent Use t = 0 and V = 0 to find constant of integration or as limits Obtain -1/2 ln(80 - kV) = t -1/2 ln 80 or equivalent Obtain given answer V = 1/4 (80 - 80e<sup>-1/4</sup>) correctly</li> <li>(ii) Use iterative formula correctly at least once Obtain final answer 0.14 Show sufficient iterations to 4 s.f. to justify answer to 2 s.f. or show a sign change in the interval (0.135, 0.145)</li> <li>(iii) State a value between 530 and 540 cm³ inclusive State or imply that volume approaches 569 cm³ (allowing any value between</li> </ul>	(b)         State or imply $\frac{da}{dx} = 4\cos 4x$ BI           Carry out complete substitution except limits         MI           Obtain $\int_{-1}^{1} (\frac{1}{4} - \frac{1}{4}u^2) du$ or equivalent         A1           Integrate to obtain form $k_1u + k_2u^3$ with non-zero constants $k_1, k_2$ MI           Use appropriate limits to obtain $\frac{11}{26}$ A1           (i)         State or imply $R = 5$ BI           Use relevant trigonometry to find α         MI           Obtain α = 0.6435         A1           (ii) (a)         Carry out appropriate method to find one value in given range Obtain 1.80         A1           Carry out appropriate method to find second value in given range Obtain 5.77 and no other value         MI           (b)         Express integrand as $k \sec^2(\theta - \text{their } \alpha)$ for any constant $k$ MI           Integrate to obtain result $k \tan(\theta - \text{their } \alpha)$ A1           Obtain correct answer $2 \tan(\theta - 0.6435)$ A1           (i)         State $\frac{dy}{dx} = 80 - kV$ B1           Correctly separate variables and attempt integration of one side Obtain $-\frac{1}{k} \ln(80 - kV) = t$ or equivalent Obtain $-\frac{1}{k} \ln(80 - kV) = t$ or equivalent         A1           Obtain $-\frac{1}{k} \ln(80 - kV) = t$ or equivalent Obtain $-\frac{1}{k} \ln(80 - kV) = t - \frac{1}{k} \ln 80$ or equivalent Obtain given answer $V = \frac{1}{k} (80 - 80e^{-kt})$ correctly         A1
